

A final remark. Justice as fairness is not a complete contract theory. For it is clear that the contractarian idea can be extended to the choice of more or less an entire ethical system, that is, to a system including principles for all the virtues and not only for justice. Now for the most part I shall consider only principles of justice and others closely related to them; I make no attempt to discuss the virtues in a systematic way. Obviously if justice as fairness succeeds reasonably well, a next step would be to study the more general view suggested by the name "rightness as fairness." But even this wider theory fails to embrace all moral relationships, since it would seem to include only our relations with other persons and to leave out of account how we are to conduct ourselves toward animals and the rest of nature. I do not contend that the contract notion offers a way to approach these questions which are certainly of the first importance; and I shall have to put them aside. We must recognize the limited scope of justice as fairness and of the general type of view that it exemplifies. How far its conclusions must be revised once these other matters are understood cannot be decided in advance.

4. THE ORIGINAL POSITION AND JUSTIFICATION

I have said that the original position is the appropriate initial status quo which insures that the fundamental agreements reached in it are fair. This fact yields the name "justice as fairness." It is clear, then, that I want to say that one conception of justice is more reasonable than another, or justifiable with respect to it, if rational persons in the initial situation would choose its principles over those of the other for the role of justice. Conceptions of justice are to be ranked by their acceptability to persons so circumstanced. Understood in this way the question of justification is settled by working out a problem of deliberation: we have to ascertain which principles it would be rational to adopt given the contractual situation. This connects the theory of justice with the theory of rational choice.

If this view of the problem of justification is to succeed, we must, of course, describe in some detail the nature of this choice problem. A problem of rational decision has a definite answer only if we know

the beliefs and interests of the parties, their relations with respect to one another, the alternatives between which they are to choose, the procedure whereby they make up their minds, and so on. As the circumstances are presented in different ways, correspondingly different principles are accepted. The concept of the original position, as I shall refer to it, is that of the most philosophically favored interpretation of this initial choice situation for the purposes of a theory of justice.

But how are we to decide what is the most favored interpretation? I assume, for one thing, that there is a broad measure of agreement that principles of justice should be chosen under certain conditions. To justify a particular description of the initial situation one shows that it incorporates these commonly shared presumptions. One argues from widely accepted but weak premises to more specific conclusions. Each of the presumptions should by itself be natural and plausible; some of them may seem innocuous or even trivial. The aim of the contract approach is to establish that taken together they impose significant bounds on acceptable principles of justice. The ideal outcome would be that these conditions determine a unique set of principles; but I shall be satisfied if they suffice to rank the main traditional conceptions of social justice.

One should not be misled, then, by the somewhat unusual conditions which characterize the original position. The idea here is simply to make vivid to ourselves the restrictions that it seems reasonable to impose on arguments for principles of justice, and therefore on these principles themselves. Thus it seems reasonable and generally acceptable that no one should be advantaged or disadvantaged by natural fortune or social circumstances in the choice of principles. It also seems widely agreed that it should be impossible to tailor principles to the circumstances of one's own case. We should insure further that particular inclinations and aspirations, and persons' conceptions of their good do not affect the principles adopted. The aim is to rule out those principles that it would be rational to propose for acceptance, however little the chance of success, only if one knew certain things that are irrelevant from the standpoint of justice. For example, if a man knew that he was wealthy, he might find it rational to advance the principle that various taxes for wel-

fare measures be counted unjust; if he knew that he was poor, he would most likely propose the contrary principle. To represent the desired restrictions one imagines a situation in which everyone is deprived of this sort of information. One excludes the knowledge of those contingencies which sets men at odds and allows them to be guided by their prejudices. In this manner the veil of ignorance is arrived at in a natural way. This concept should cause no difficulty if we keep in mind the constraints on arguments that it is meant to express. At any time we can enter the original position, so to speak, simply by following a certain procedure, namely, by arguing for principles of justice in accordance with these restrictions.

It seems reasonable to suppose that the parties in the original position are equal. That is, all have the same rights in the procedure for choosing principles; each can make proposals, submit reasons for their acceptance, and so on. Obviously the purpose of these conditions is to represent equality between human beings as moral persons, as creatures having a conception of their good and capable of a sense of justice. The basis of equality is taken to be similarity in these two respects. Systems of ends are not ranked in value; and each man is presumed to have the requisite ability to understand and to act upon whatever principles are adopted. Together with the veil of ignorance, these conditions define the principles of justice as those which rational persons concerned to advance their interests would consent to as equals when none are known to be advantaged or disadvantaged by social and natural contingencies.

There is, however, another side to justifying a particular description of the original position. This is to see if the principles which would be chosen match our considered convictions of justice or extend them in an acceptable way. We can note whether applying these principles would lead us to make the same judgments about the basic structure of society which we now make intuitively and in which we have the greatest confidence; or whether, in cases where our present judgments are in doubt and given with hesitation, these principles offer a resolution which we can affirm on reflection. There are questions which we feel sure must be answered in a certain way. For example, we are confident that religious intolerance and racial discrimination are unjust. We think that we have examined these

things with care and have reached what we believe is an impartial judgment not likely to be distorted by an excessive attention to our own interests. These convictions are provisional fixed points which we presume any conception of justice must fit. But we have much less assurance as to what is the correct distribution of wealth and authority. Here we may be looking for a way to remove our doubts. We can check an interpretation of the initial situation, then, by the capacity of its principles to accommodate our firmest convictions and to provide guidance where guidance is needed.

In searching for the most favored description of this situation we work from both ends. We begin by describing it so that it represents generally shared and preferably weak conditions. We then see if these conditions are strong enough to yield a significant set of principles. If not, we look for further premises equally reasonable. But if so, and these principles match our considered convictions of justice, then so far well and good. But presumably there will be discrepancies. In this case we have a choice. We can either modify the account of the initial situation or we can revise our existing judgments, for even the judgments we take provisionally as fixed points are liable to revision. By going back and forth, sometimes altering the conditions of the contractual circumstances, at others withdrawing our judgments and conforming them to principle, I assume that eventually we shall find a description of the initial situation that both expresses reasonable conditions and yields principles which match our considered judgments duly pruned and adjusted. This state of affairs I refer to as reflective equilibrium.⁷ It is an equilibrium because at last our principles and judgments coincide; and it is reflective since we know to what principles our judgments conform and the premises of their derivation. At the moment everything is in order. But this equilibrium is not necessarily stable. It is liable to be upset by further examination of the conditions which should be imposed on the contractual situation and by particular

7. The process of mutual adjustment of principles and considered judgments is not peculiar to moral philosophy. See Nelson Goodman, *Fact, Fiction, and Forecast* (Cambridge, Mass., Harvard University Press, 1955), pp. 65–68, for parallel remarks concerning the justification of the principles of deductive and inductive inference.

cases which may lead us to revise our judgments. Yet for the time being we have done what we can to render coherent and to justify our convictions of social justice. We have reached a conception of the original position.

I shall not, of course, actually work through this process. Still, we may think of the interpretation of the original position that I shall present as the result of such a hypothetical course of reflection. It represents the attempt to accommodate within one scheme both reasonable philosophical conditions on principles as well as our considered judgments of justice. In arriving at the favored interpretation of the initial situation there is no point at which an appeal is made to self-evidence in the traditional sense either of general conceptions or particular convictions. I do not claim for the principles of justice proposed that they are necessary truths or derivable from such truths. A conception of justice cannot be deduced from self-evident premises or conditions on principles; instead, its justification is a matter of the mutual support of many considerations, of everything fitting together into one coherent view.

A final comment. We shall want to say that certain principles of justice are justified because they would be agreed to in an initial situation of equality. I have emphasized that this original position is purely hypothetical. It is natural to ask why, if this agreement is never actually entered into, we should take **any interest** in these principles, moral or otherwise. The answer is that the conditions embodied in the description of the original position are ones that we do in fact accept. Or if we do not, then perhaps we can be persuaded to do so by philosophical reflection. Each aspect of the contractual situation can be given supporting grounds. Thus what we shall do is to collect together into one conception a number of conditions on principles that we are ready upon due consideration to recognize as reasonable. These constraints express what we are prepared to regard as limits on fair terms of social cooperation. One way to look at the idea of the original position, therefore, is to see it as an expository device which sums up the meaning of these conditions and helps us to extract their consequences. On the other hand, this conception is also an intuitive notion that suggests its own elaboration, so that led on by it we are drawn to define more clearly the standpoint

from which we can best interpret moral relationships. We need a conception that enables us to envision our objective from afar: the intuitive notion of the original position is to do this for us.⁸

5. CLASSICAL UTILITARIANISM

There are many forms of utilitarianism, and the development of the theory has continued in recent years. I shall not survey these forms here, nor take account of the numerous refinements found in contemporary discussions. My aim is to work out a theory of justice that represents an alternative to utilitarian thought generally and so to all of these different versions of it. I believe that the contrast between the contract view and utilitarianism remains essentially the same in all these cases. Therefore I shall compare justice as fairness with familiar variants of intuitionism, perfectionism, and utilitarianism in order to bring out the underlying differences in the simplest way. With this end in mind, the kind of utilitarianism I shall describe here is the strict classical doctrine which receives perhaps its clearest and most accessible formulation in Sidgwick. The main idea is that society is rightly ordered, and therefore just, when its major institutions are arranged so as to achieve the greatest net balance of satisfaction summed over all the individuals belonging to it.⁹

8. Henri Poincaré remarks: "Il nous faut une faculté qui nous fasse voir le but de loin, et, cette faculté, c'est l'intuition." *La Valeur de la science* (Paris, Flammarion, 1909), p. 27.

9. I shall take Henry Sidgwick's *The Methods of Ethics*, 7th ed. (London, 1907), as summarizing the development of utilitarian moral theory. Book III of his *Principles of Political Economy* (London, 1883) applies this doctrine to questions of economic and social justice, and is a precursor of A. C. Pigou, *The Economics of Welfare* (London, Macmillan, 1920). Sidgwick's *Outlines of the History of Ethics*, 5th ed. (London, 1902), contains a brief history of the utilitarian tradition. We may follow him in assuming, somewhat arbitrarily, that it begins with Shaftesbury's *An Inquiry Concerning Virtue and Merit* (1711) and Hutcheson's *An Inquiry Concerning Moral Good and Evil* (1725). Hutcheson seems to have been the first to state clearly the principle of utility. He says in *Inquiry*, sec. III, §8, that "that action is best, which procures the greatest happiness for the greatest numbers; and that, worst, which, in like manner, occasions misery." Other major eighteenth century works are Hume's *A Treatise of Human Nature* (1739), and *An Enquiry Concerning the Principles of Morals* (1751); Adam Smith's *A Theory of the Moral*
